

Cable Sweep

Use to Protect Buried Cable Runs

PRODUCT DESCRIPTION

Protect coax cables where they are typically exposed to damage from mowers or weed trimmers. Weed trimmers can damage anything including the outer jacket of coax cable. The plastic sweeps can be attached to the house or to satellite dish pole mount to shield the coax from damage due to yard maintenance. The sweep helps installers avoid return calls to the job site due to jacket damage.

The flat reinforcing web inside the curve of each 90 degree sweep makes a loud, audible noise when a weed trimmer string hits the web surface. The web stabilizes the sweep with little soil coverage and provides a suggested depth of burial.

Sweeps have thick walls and a large inside diameter which can accommodate coax sizes up to Series 6 quad shield with a siamese ground wire.

PRODUCT FEATURES

- UV stable ABS plastic
- Heavy duty screw mounting tabs
- Can be attached to a pole mount with your cable ties
- Easy and fast installation

PACKAGING

Bag of 10
