Overview

The ADTRAN® 834-5 is a carrier-class Dual-Band Wi-Fi 5 Gigabit Ethernet router. It is built to deliver superior Wi-Fi 5 performance, true gigabit routing performance, and advanced service delivery capabilities, all at an affordable price. Its attractive design enables it to be prominently featured in a subscriber's home.

The Solution

The ADTRAN 834-5 is designed for service providers that require carrier-class performance, reliability, and firmware flexibility in their broadband access gateways. Native support for IPv6, multicast traffic handling for IPTV, dynamic Quality of Service, and TR-069 remote management are standard features. Out-of-the-box, the ADTRAN 834-5 offers outstanding interoperability with industry-leading TR-069 remote management systems and OpenSync integration.

Speed to Burn and Room to Grow

With twice the RAM and twice the speed of our previous generation of devices, the 834-5 boasts a Dual-core ARM® Cortex-A53 1.35GHz processor with the power to route IPv4/v6 traffic at 1Gbps bidirectionally, with plenty of processing power left over for value-added applications, such as HomePass by Plume®, giving service providers unlimited feature, price, and service delivery options.

OpenSync Integrated

OpenSync is open-source software that delivers and manages your evolving home connectivity and entertainment services. OpenSync acts as silicon, customer premises equipment, and a cloud-agnostic connection between in-home hardware devices and the cloud. Use OpenSync to collect measurements and statistics from connected user devices and network management elements, as well as to enable customized connectivity services.
