ds\specifications\pvak

Product Description

- This kit provides the parts necessary to secure lightweight objects to sheetrock walls if a wall stud cannot be reached. Also provides a dependable grip for lightweight objects in concrete, brick or masonry walls.
-
- The plastic anchors have good teeth that really grip rather than radial 'rings' seen on some anchors that don't really hold very well.
-
- These anchors are not recommended to be used to secure satellite antennas or satellite antenna wind legs. Use our lag screw LS516X134 or similar in wood and our part PVLS516 and lag screws to secure antennas and mounts in concrete or masonry.

Mechanical

- A mechanical specification drawing is attached

Packaging

- This kit includes 100 plastic anchors, 100 #8 x 1" wood screws and one 1/4" carbide tip masonry bit in a reusable flexible plastic box.
