

NON-PENETRATING ROOF MOUNT

Flat Roof Mounting System

DIMENSIONS

Width:	25.25 in.
Height:	1.50 in.
Depth:	37.75 in.
Volume:	1,429.78 cubic in.
Weight:	12.10 lbs.

DESCRIPTION

This roof mounting system does not require any holes to be drilled, which avoids reluctance by building owners and reduces the possibility of roof leaks. The total weight of the assembly can be varied by the use of either "light" concrete blocks or standard weight blocks. A rubber mat is recommended to avoid 'imprinting' the frame into the flat roof coating. Our mat, NPRMAT1, will show maximum professionalism while giving the building owner complete satisfaction that caution is the main priority when installing on the customer's roof.

MECHANICAL CHARACTERISTICS

- Frame is made from 1.2" angle steel
- Center section has various hole arrangements for assorted attachments
- Grey powder coated steel construction
- Frame accommodates six concrete blocks
- Six 1/4" x 7/8" hex head bolts, washers and locking nuts provided
- Frame weight
