### **FCC Radiation Exposure Statement:**

This equipment complies with FCC radiation exposure limits set forth for an uncontrolled environment. This equipment should be installed and operated with minimum distance 20cm between the radiator & your body.

### **FCC Warning**

This device complies with Part 15 of the FCC Rules. Operation is subject to the following two conditions:

(1) This device may not cause harmful interference, and (2) this device must accept any interference received, including interference that may cause undesired operation.

NOTE 1: This equipment has been tested and found to comply with the limits for a Class B digital device, pursuant to part 15 of the FCC Rules. These limits are designed to provide reasonable protection against harmful interference in a residential installation. This equipment generates uses and can radiate radio frequency energy and, if not installed and used in accordance with the instructions, may cause harmful interference to radio communications. However, there is no guarantee that interference will not occur in a particular installation. If this equipment does cause harmful interference to radio or television reception, which can be determined by turning the equipment off and on, the user is encouraged to try to correct the interference by one or more of the following measures:

- Reorient or relocate the receiving antenna.
- Increase the separation between the equipment and receiver.
- Connect the equipment into an outlet on a circuit different from that to which the receiver is connected.
- Consult the dealer or an experienced radio/TV technician for help.

NOTE 2: Any changes or modifications to this unit not expressly approved by the party responsible for compliance could void the user's authority to operate the equipment.

## 1. Overview

The TITAN4000 is highly innovative and patented LTE outdoor CPE product designed to enable quick and easy LTE fixed data service deployment for residential and SOHO customers. It provides high speed LAN services to end users who need both bandwidth and multi-media data service in enterprise or home. It can also be used to support wireless fall back service.

### 1.1. User Interface Specification

Model	Description & User Interface
TITAN4000	<ul style="list-style-type: none"> <li>- 1 RJ45 10/100/1000M LAN port</li> <li>- SYS, MOD, SIM, ETH, Wi-Fi, RF (5 Signal intensity LEDs)</li> <li>- PoE DC 48V, Power &lt; 18 Watts (Average)</li> <li>- Dimensions: 300 mm (L) × 290 mm (W) × 97 mm (D)</li> <li>- Weight: &lt;5Kg</li> <li>- Operating Temperature: -40°C to 65°C</li> <li>- Storage Temperature: -40°C to 85°C</li> </ul>

## 2. Getting Started

### 2.1. Packing list and CPE Unit

Upon receiving the product, please unpack the product package carefully. Each product is shipped with the following items:

**Table 2-1 Packing List**

Products	Quantity
CPE Unit	1
Clamp	2
Mounting Brackets	1
ETH Cable 2.0M	1
PoE Adapter	1
Power Cord 1.5M	1
Quick User Guide	1

If you find any of the items missed, please contact your local distributor immediately.

### 2.2. Installing the Equipment

Open the SIM card cover, insert the SIM card and connected the ETH cable.

The user should use **SFTP CAT5E** Ethernet cable and connect to the appropriate LAN port

■ **Clamp Mounting Option (Preferred Method)**

■ **Bracket Mounting Option**

## ■ Connecting the Device

## ■ LED Display

LED	Function	Description
SYS	System run indicator	Solid green – Device is in normal operation.
MOD	WAN port status	OFF – NO wireless network access. Solid Green – WAN data transmission in progress
SIM	SIM card indicator	Light is on – SIM card state is ready, Blinking Green – SIM card is error.
ETH	LAN port status	Solid Green – LAN port is up. Blinking Green –LAN port in working.
Wi-Fi	Wi-Fi indicator	Light is on –Wi-Fi is on.
RF (5LEDs)	RF Signal Strength	5 level signal strengths indication by 5 green LEDs. 1st Green LED: $-115\text{dBm} < \text{RSRP}$ 2nd Green LED: $-115\text{dBm} \leq \text{RSRP} < -105\text{dBm}$ 3rd Green LED: $-105\text{dBm} \leq \text{RSRP} < -95\text{dBm}$ 4th Green LED: $-95\text{dBm} \leq \text{RSRP} < -85\text{dBm}$ 5th Green LED: $-85 \leq \text{RSRP}$

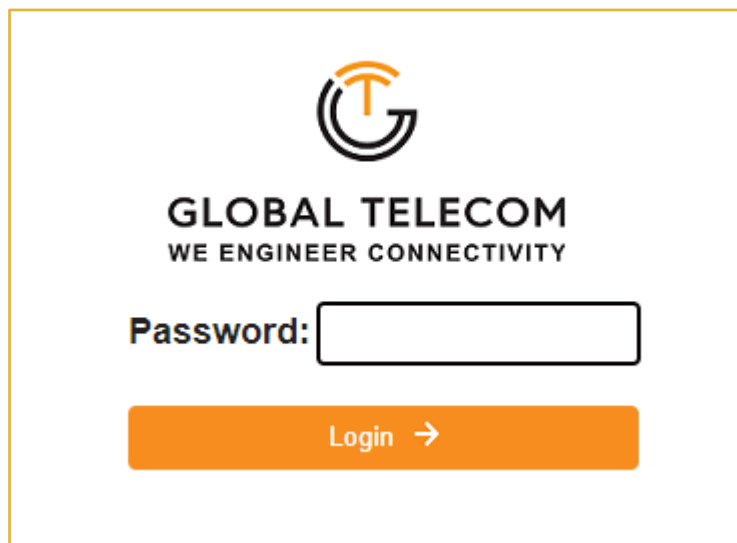

## 3. Managing the CPE Device

---

### 3.1. WEB Login

It is recommended that you log in to the device by using a web browser from a PC that's connected to the device's LAN port. To log in, open a web browser and type `http://192.168.0.1` in the address bar. A window will pop up requesting a password. Input the user login password and then click the "Login" button. After successfully logging in, the default home page will appear.

The default administrator password is **"Global + last 6 digits of MAC"**.

The image shows a web login form for Global Telecom. At the top is the company logo, a stylized 'G' with an orange antenna-like shape on top. Below the logo is the text 'GLOBAL TELECOM' in bold, followed by 'WE ENGINEER CONNECTIVITY' in a smaller font. Underneath is the label 'Password:' followed by a text input field. At the bottom is an orange button with the text 'Login' and a right-pointing arrow.

## 4. LTE Configuration

### 4.1. Overview

Once the user is logged in, the following window device status window will be prompted for viewing. It contains both the system information, networking and device information configured for the device.

The screenshot displays the LTE Configuration Overview page. The top navigation bar includes tabs for LTE, Network, Security, Applications, Management, Maintenance, and Status. The main content area is divided into four sections: System Information, Radio Information, Connection, and Activity. The System Information section shows details like Manufacturer (Global Telecom), Model Name (TITAN4000), Chip Model (GDM7243AP), and Supported Band (48). The Radio Information section lists various signal quality metrics such as RSRP, RSSI, RSRQ, SINR, and CINR. The Connection section shows the Media State (ATTACHED), Connection Time (4min 15 sec), and Network Description (Internet). The Activity section shows Sent and Received data statistics.

System Information	
Manufacturer	Global Telecom
Model Name	TITAN4000
Chip Model	GDM7243AP
Serial Number	
IMEI	
IMSI	
Supported Band	48
Firmware Version	

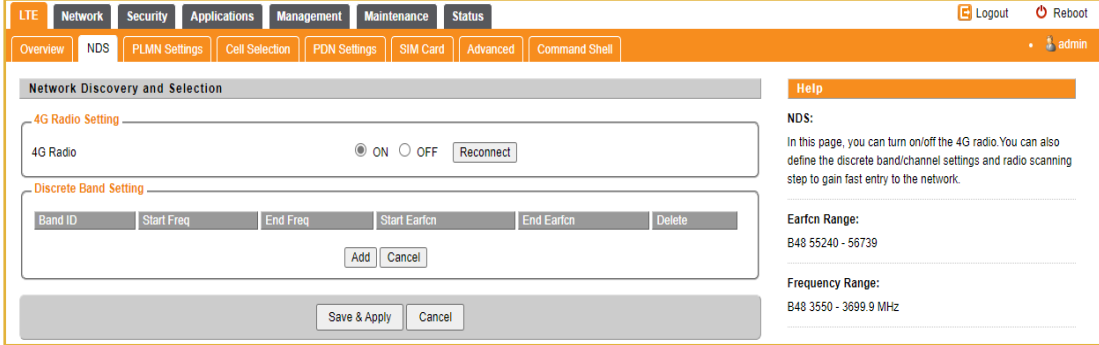

Radio Information	
RSRP	-114.1 / -141.4 / -114.6 / -136.6 dBm
RSSI	-86.7 / -98.5 / -87.3 / -95.2 dBm
RSRQ	-6.5 / -22.7 / -6.5 / -21.3 dB
SINR	11 dB
CINR	12.7 dB
CQI	9
Rank Indication	2
Transmit Mode	TM3
Band ID	48
UL/DL Bandwidth	20000 / 20000 KHz
UL/DL Earfcn	56528 / 56528
UL/DL MCS	QPSK(0) / QPSK(0)
RRC State	active
EMM State	registered home
C-RNTI	526
PCI	94
eNB ID	0
Cell ID	79
ECI	000004F
Total TxPower	- dBm
UL/DL Throughput	0 bps / 0 bps
UL/DL Max Throughput	61.58 kbps / 20.09 kbps

Connection	
Media State	ATTACHED
Connection Time	4min 15 sec
SIM Card State	Ready
Network Description	Internet
PDN type	IPv4
Registered PLMN	
IPv4 Address	10.11.100.167
IPv4 DNS	10.3.0.1 10.3.0.1

Activity	
Sent	15,695 bytes / 85 packets
Received	7,597 bytes / 44 packets

### 4.2. ND&S Configuration

The LTE radio can be enabled or disabled via 4G Radio setting. The radio can also be reset via Reconnect.

**Network Discovery and Selection**

**4G Radio Setting**

4G Radio ☒ ON ☐ OFF Reconnect

**Discrete Band Setting**

Band ID	Start Freq	End Freq	Start Earfcn	End Earfcn	Delete
<input type="button" value="Add"/> <input type="button" value="Cancel"/>					

**Help**

**NDS:**  
In this page, you can turn on/off the 4G radio. You can also define the discrete band/channel settings and radio scanning step to gain fast entry to the network.

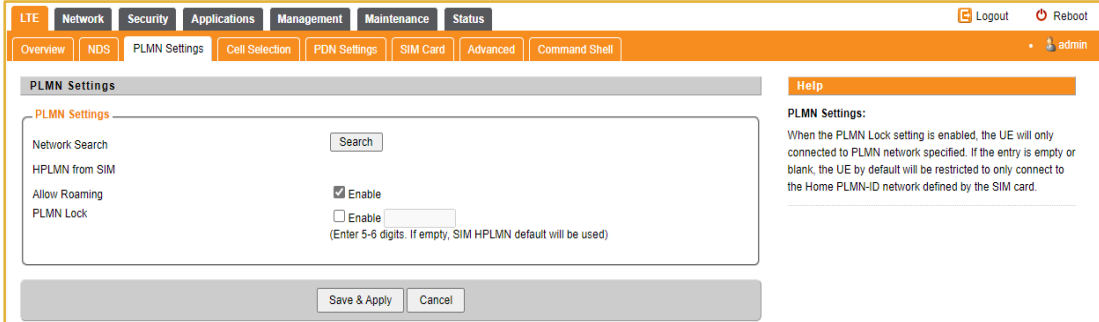

**Earfcn Range:**  
B48 55240 - 56739

**Frequency Range:**  
B48 3550 - 3699.9 MHz

Note: After configure any parameters of the device, you must click the “Save & Apply” button to save the configuration. Otherwise the configuration will not take effect.

### 4.3. PLMN Selection

The user can add and configure the PLMN list to restrict the CPE to attach. The CPE will attach to network according to the PLMN priority assigned.

**PLMN Settings**

**Network Search**

HPLMN from SIM ☐

Allow Roaming ☐

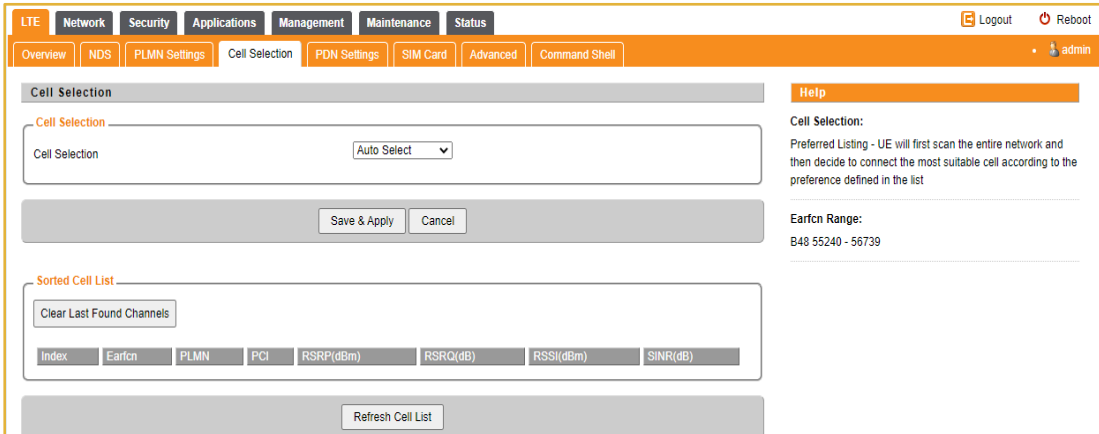

PLMN Lock ☒   
(Enter 5-6 digits. If empty, SIM HPLMN default will be used)

**Help**

**PLMN Settings:**  
When the PLMN Lock setting is enabled, the UE will only connected to PLMN network specified. If the entry is empty or blank, the UE by default will be restricted to only connect to the Home PLMN-ID network defined by the SIM card.

### 4.4. Cell Selection

The cell selection menu is used to configure how CPE will select the best cell. User can configure the “Auto Select” mode to select cell based 3GPP standard. When configured with “preferred Listing”, user add the desired cell ID to the list and the CPE will attach to the appropriate cell after a full scan.

**Cell Selection**

Cell Selection

**Sorted Cell List**

Index	Earfcn	PLMN	PCI	RSRP(dBm)	RSRQ(dB)	RSSI(dBm)	SINR(dB)
<input type="button" value="Refresh Cell List"/>							

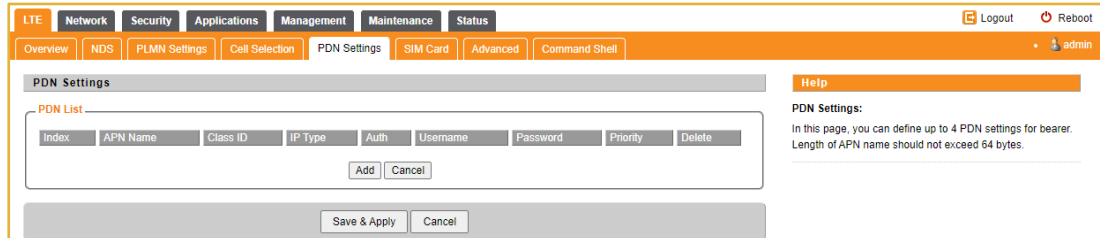

**Help**

**Cell Selection:**  
Preferred Listing - UE will first scan the entire network and then decide to connect the most suitable cell according to the preference defined in the list

**Earfcn Range:**  
B48 55240 - 56739

## 4.5. PDN Setting

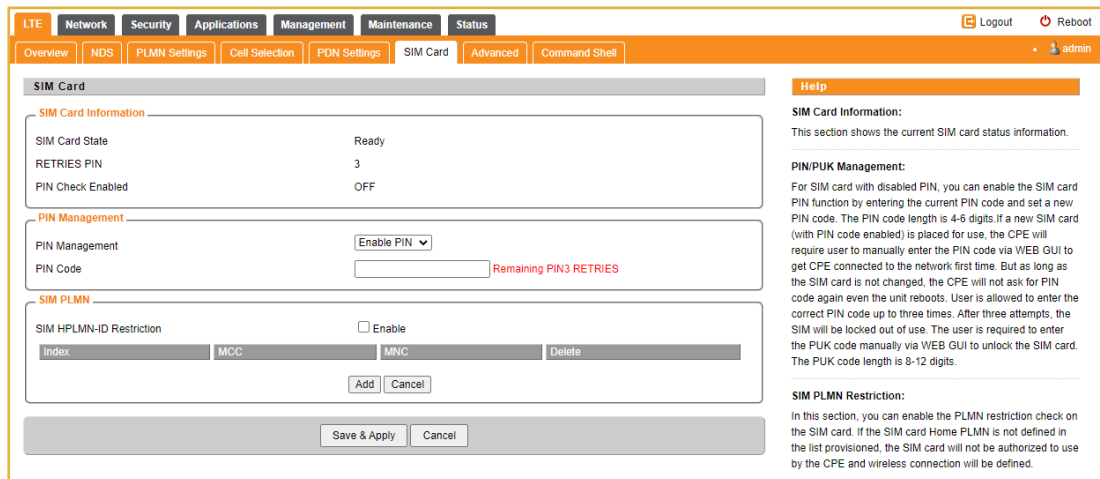

This menu is used to configure the operator APN profile. You can configure single or multiple APNs for the operator network. The below shows an example of two APN configuration.

You can view the APN status info in the Status menu.

## 4.6. SIM Card

The SIM card menu is used to view the SIM card status and perform PIN code management for SIM card. You disable or enable the SIM card PIN check on the CPE to bind the SIM card inserted.

## 4.7. Advanced

In this menu, you can configure advanced options for the CPE operation.

ZUC Support:

Optional setting to support ZUC 128-EEA3/EIA3 encryption.

PSM Timer:

Power Save Management Timer.

T3324:

Once expired, the UE goes power saving mode and will not listen to paging but remain registered in the network. The default setting is 2 seconds.

T3412:

Once expired the UE will perform Tracking Area Update. The default setting is 10 hours.

Fast scan will allow you to quickly connect to good cell when they are first found instead of search the best cell. The ZUC encryption support is only required when your core network (EPC) force to use the ZUC encryption for access authentication. The operation mode allows you to select the UE capability for receiving and transmitting.

In addition, the PSM timer and location service UE settings can also be configured for advanced users. Default settings should be used for normal operation.

## 4.8. Command Shell

The Command Shell is used to run LTE command via the WEB GUI interface. You can type the command and click the APPLY button to execute.

## 5. Network Configuration

### 5.1. Internet

This section allows user to configure the CPE operation mode, device name, MTU and etc. The CPE default Operation Mode is Router, and the LAN PC connected to device LAN port will obtain IP address via DHCP server of the device. The default MTU Size is 1500, user can modify the MTU Size if necessary.

The screenshot shows the 'Internet Setup' page with the following sections:

- Internet Connection:**
  - Connection Mode: ☒ Router / NAT, ☐ IP Passthrough, ☐ L2 Bridge
  - NAT: ☒ Enable
- Optional:**
  - Device Name: Global
  - Host Name:
  - Domain Name:
  - MTU: Default (dropdown), 1400 (input)
  - IP Type: ☒ IPv4, ☐ IPv6, ☐ IPv4v6

Buttons at the bottom: Save & Apply, Cancel.

**Help:**

- Internet Connection:** Specify how the network connection will be established.
- Host Name:** Enter the host name provided by your service provider.
- Domain Name:** Enter the domain name provided by your service provider.

Note when setting the connection mode as L2 Bridge or L3 Bridge, there will be a warning window pops up. Remember the management IP address 192.168.0.1 and click the “ok” button.

When the user wants to manage the home page again, the PC should be configured a static IP address as 10.1.1.X manual in order to visit the CPE managing page <http://10.1.1.1>.

### 5.2. LAN Setting

The LAN setting allows user to specify the device LAN IP, DHCP server setting, Local DNS and etc. When Router mode is selected, the DHCP server should be enabled by default.

User is advised to leave the default setting unchanged for quick configuration and smooth device operation.

## 5.4. VPN Setting For L2 Bridge Mode

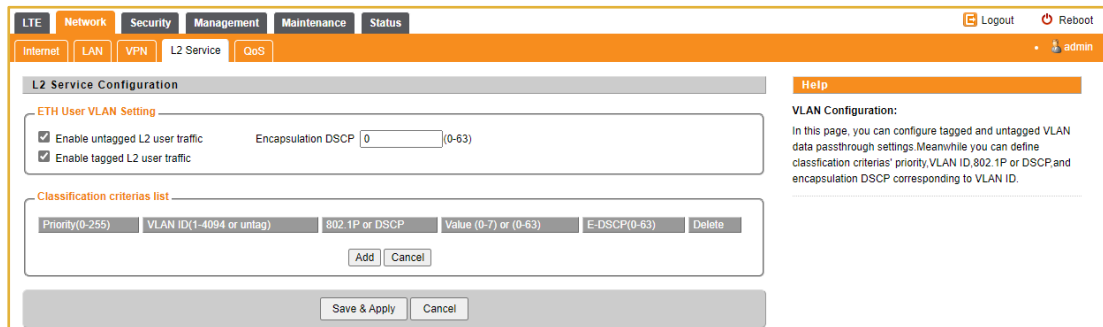

Under the L2 Bridge connection mode, only L2 GRE can be configured as follows.

The screenshot shows the 'VPN Setup' configuration page. The 'VPN Protocol' is set to 'GRE'. The 'GRE Destination IP Address' field is empty. The page includes 'Save & Apply' and 'Cancel' buttons. A help section on the right explains that this page is for configuring VPN services for PPTP, L2TP, and GRE.

## 5.5. L2 Service For L2 Bridge Mode

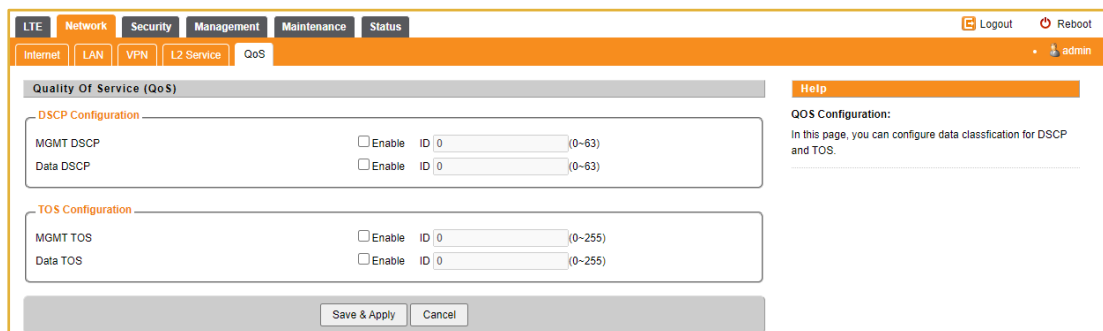

Under the L2 Bridge connection mode, the user can use L2 Service configuration to manage and tag 802.1p or DSCP for different VLAN packets.

The screenshot shows the 'L2 Service Configuration' page. Under 'ETH User VLAN Setting', both 'Enable untagged L2 user traffic' and 'Enable tagged L2 user traffic' are checked. The 'Encapsulation DSCP' is set to 0. A table for 'Classification criteria list' is shown with columns for Priority, VLAN ID, 802.1P or DSCP, Value, E-DSCP, and a Delete button. The page includes 'Save & Apply' and 'Cancel' buttons. A help section on the right explains that this page is for configuring tagged and untagged VLAN data passthrough settings.

## 5.6. QoS Setting

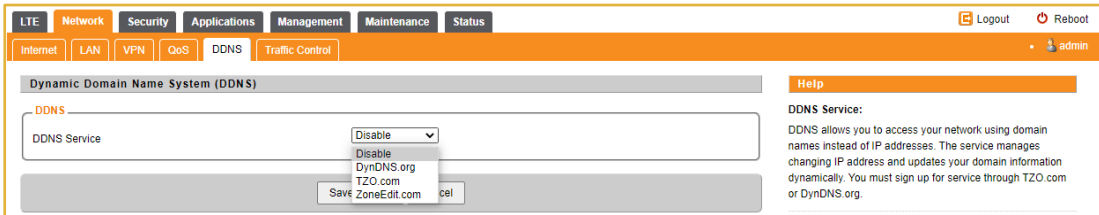

This configuration menu allows user to tag DSCP or TOS value for CPE local data (Management) and LAN port data (Data).

The screenshot shows the 'Quality Of Service (QoS)' configuration page. Under 'DSCP Configuration', 'MGMT DSCP' and 'Data DSCP' are both set to 'Enable' with an ID of 0. Under 'TOS Configuration', 'MGMT TOS' and 'Data TOS' are both set to 'Enable' with an ID of 0. The page includes 'Save & Apply' and 'Cancel' buttons. A help section on the right explains that this page is for configuring data classification for DSCP and TOS.

## 5.7. DDNS Setting For Router Mode

This configuration menu allows user to configure use of different DDNS service for router mode operation.

**Dynamic Domain Name System (DDNS)**

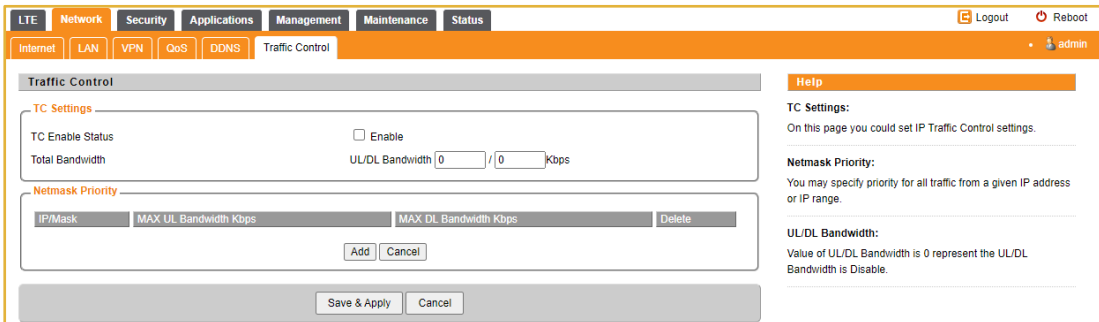

DDNS Service: Disable (dropdown menu with options: Disable, DynDNS.org, TZO.com, ZoneEdit.com)

**Help**

**DDNS Service:**  
DDNS allows you to access your network using domain names instead of IP addresses. The service manages changing IP address and updates your domain information dynamically. You must sign up for service through TZO.com or DynDNS.org.

## 5.8. Traffic Control Setting For Router Mode

This configuration menu allows user to configure the data priority and allowed bandwidth for LAN data traffic.

**Traffic Control**

**TC Settings**

TC Enable Status: ☐ Enable

Total Bandwidth: UL/DL Bandwidth  /  Kbps

**Netmask Priority**

IP/Mask	MAX UL Bandwidth Kbps	MAX DL Bandwidth Kbps	Delete

**Help**

**TC Settings:**  
On this page you could set IP Traffic Control settings.

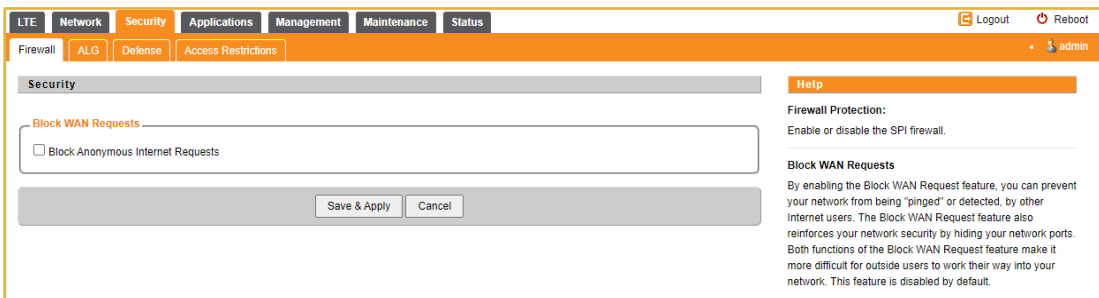

**Netmask Priority:**  
You may specify priority for all traffic from a given IP address or IP range.

**UL/DL Bandwidth:**  
Value of UL/DL Bandwidth is 0 represent the UL/DL Bandwidth is Disable.

## 6. Security Configuration

### 6.1. Firewall

This allows user to configure CPE firewall.

**Security**

**Block WAN Requests**

☐ Block Anonymous Internet Requests

**Help**

**Firewall Protection:**  
Enable or disable the SPI firewall.

**Block WAN Requests**  
By enabling the Block WAN Request feature, you can prevent your network from being "pinged" or detected, by other Internet users. The Block WAN Request feature also reinforces your network security by hiding your network ports. Both functions of the Block WAN Request feature make it more difficult for outside users to work their way into your network. This feature is disabled by default.

### 6.2. ALG

This allows user to configure the application level gateways for many common applications.

LTE	Network	Security	Applications	Management	Maintenance	Status														
<div> <a href="#">Firewall</a> <a href="#">ALG</a> <a href="#">Defense</a> <a href="#">Access Restrictions</a> </div> <div> <a href="#">Logout</a> <a href="#">Reboot</a> </div> <div> <a href="#">admin</a> </div>

Help

Port Range Forwarding:

Certain applications may require to open specific ports in order for it to function correctly. Examples of these applications include servers and certain online games. When a request for a certain port comes in from the Internet, the device will route the data to the computer you specify. Due to security concerns, you may want to limit port forwarding to only those ports you are using, and uncheck the Enable checkbox after you are finished.

### 7.2. Port Forwarding

This menu allows user to configure the port forwarding rules for the CPE in router mode.

**Port Forwarding**

Forwards

Application	Port from	Protocol	IP Address	Port to	Enable	Delete
<input type="button" value="Add"/> <input type="button" value="Cancel"/>						

**Help**

**Port Forwarding:**  
Certain applications may require to open specific ports in order for it to function correctly. Examples of these applications include servers and certain online games. When a request for a certain port comes in from the Internet, the device will route the data to the computer you specify. Due to security concerns, you may want to limit port forwarding to only those ports you are using, and uncheck the *Enable* checkbox after you are finished.

### 7.3. DMZ

This menu allows user to configure the DMZ setting for CPE in router mode. Web server, Telnet/SSH and Ping Service port can be exempted from DMZ mapping if required. By enabling DMZ option will make the specified local LAN host (DMZ IP) exposed to Internet.

**Demilitarized Zone (DMZ)**

DMZ

DMZ Enable Status ☐ Enable

DMZ Host IP Address 192.168.0.

Exclude Web Server Port ☒ Enable

Exclude Telnet/SSH Port ☒ Enable

Exclude Ping Service ☒ Enable

**Help**

**DMZ:**  
Enabling this option will expose the specified host to the Internet. All ports will be accessible from the Internet.

### 7.4. UPnP

This menu allows user to configure the UPnP application for on-demand “DMZ” support. The current forwarding rules created can be viewed and cleared if required.

**Universal Plug and Play (UPnP)**

Forwards

Description	From (WAN)	To (LAN)	IP Address	Protocol	Delete
- None -					

**UPnP Configuration**

UPnP Service ☐ Enable

UPnP Notification Interval  (30-600s)

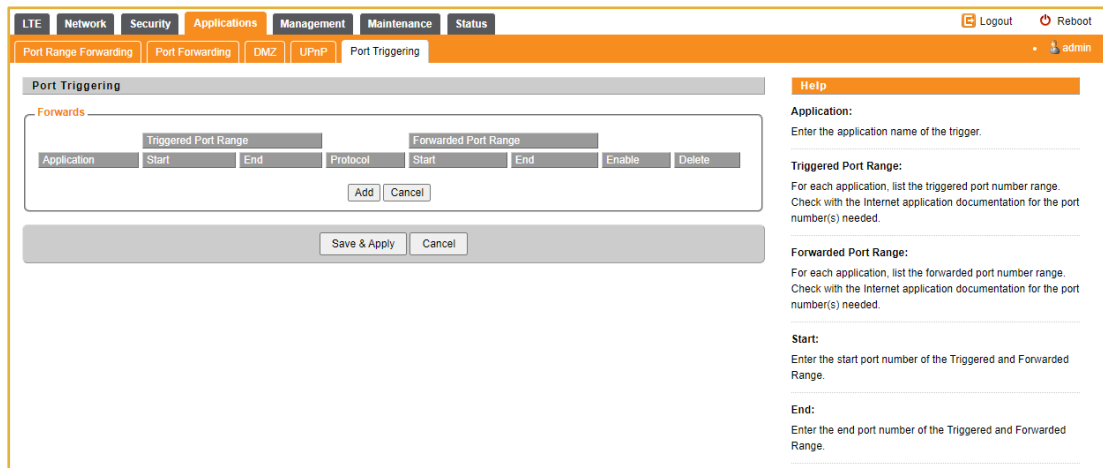

**Help**

**Forwards:**  
Configure Port forwarding for UPnP. Click the delete to delete individual entry.

**UPnP Service:**  
Allows applications to automatically setup port forwards.

### 7.5. Port Triggering

This menu allows user to configure forward certain port range to different port range for specific protocol.

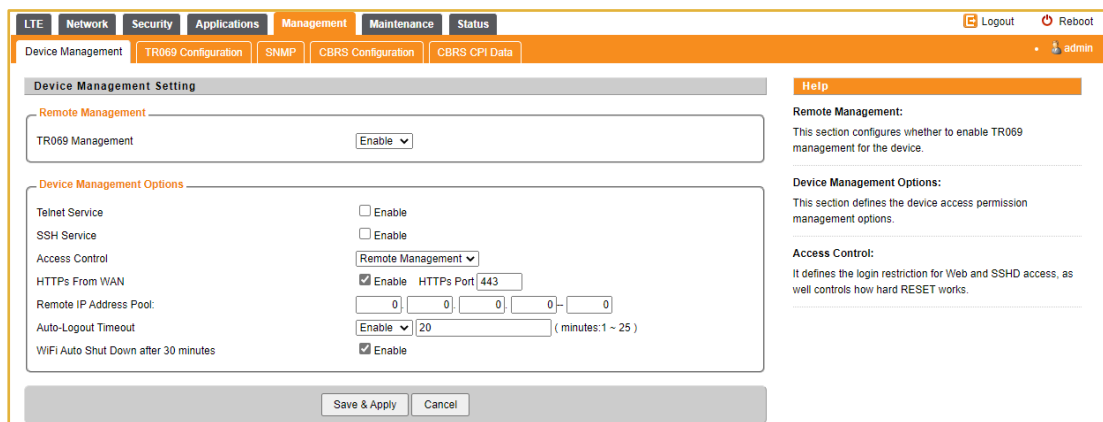

The screenshot shows the 'Port Triggering' configuration page. The top navigation bar includes tabs for LTE, Network, Security, Applications, Management, Maintenance, and Status. The 'Applications' tab is active, and the 'Port Triggering' sub-tab is selected. The main content area is titled 'Port Triggering' and contains a 'Forwards' section with a table for adding triggers. The table has columns for Application, Triggered Port Range (Start, End), Protocol, Forwarded Port Range (Start, End), Enable, and Delete. Below the table are 'Add' and 'Cancel' buttons. At the bottom of the main section are 'Save & Apply' and 'Cancel' buttons. On the right side, there is a 'Help' section with instructions for configuring the application, triggered port range, forwarded port range, start, and end ports.

## 8. Management

### 8.1. Device Management

The menu allows user to configure device management mode and various control. Telnet, SSH, and HTTPs can be enabled or disabled via configuration. Auto WEB GUI logout can also be configured.

The screenshot shows the 'Device Management Setting' page. The top navigation bar is the same as the previous page. The 'Management' tab is active, and the 'Device Management' sub-tab is selected. The main content area is titled 'Device Management Setting' and contains two sections: 'Remote Management' and 'Device Management Options'. The 'Remote Management' section has a dropdown menu set to 'Enable'. The 'Device Management Options' section has several checkboxes and input fields: 'Telnet Service' (unchecked), 'SSH Service' (unchecked), 'Access Control' (set to 'Remote Management'), 'HTTPs From WAN' (checked, with 'HTTPs Port' set to 443), 'Remote IP Address Pool' (set to 0.0.0.0-0.0.0.0), 'Auto-Logout Timeout' (set to 20 minutes), and 'WiFi Auto Shut Down after 30 minutes' (checked). At the bottom of the main section are 'Save & Apply' and 'Cancel' buttons. On the right side, there is a 'Help' section with instructions for configuring remote management and device management options.

When Telnet is enabled, user can telnet to CPE according to the below steps:

- CMD shell and run command:
- telnet 10.1.1.1
- Login: root
- Password: root123

Update Method:

**Help**

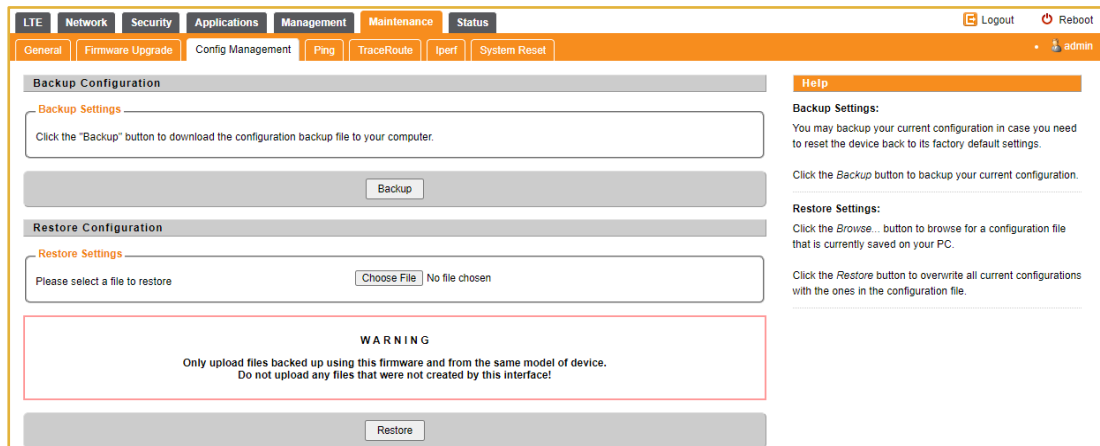

**Local Firmware Upgrade:**  
Click on the *Browse...* button to select the firmware file to be uploaded to the device.  
  
Click the *Upgrade* button to begin the upgrade process which must not be interrupted.

**Remote Firmware Upgrade:**  
You need to fill in the connection configs of HTTP/FTP or TFTP server.  
  
Click the *Upgrade* button to begin the upgrade process which must not be interrupted.

**Upgrade:**  
Link with eNB is reached in less than 5 minutes since reboot after firmware flashing, and the link is stable during 1 minute, then after 1 minute of link CPE will set the running version as Main automatically

## 9.3. Config Management

This menu allows user to backup or restore device configuration file.

**Backup Configuration**

**Backup Settings**

Click the "Backup" button to download the configuration backup file to your computer.

**Restore Configuration**

**Restore Settings**

Please select a file to restore  No file chosen

**WARNING**

Only upload files backed up using this firmware and from the same model of device.  
Do not upload any files that were not created by this interface!

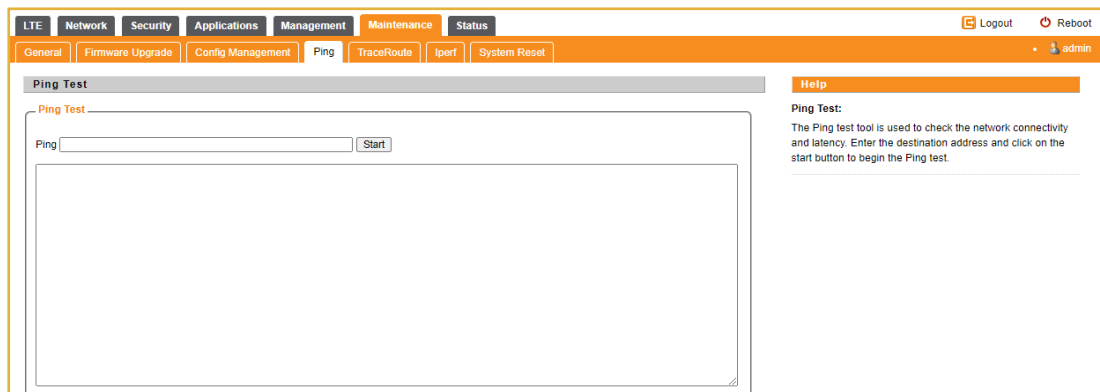

**Help**

**Backup Settings:**  
You may backup your current configuration in case you need to reset the device back to its factory default settings.  
  
Click the *Backup* button to backup your current configuration.

**Restore Settings:**  
Click the *Browse...* button to browse for a configuration file that is currently saved on your PC.  
  
Click the *Restore* button to overwrite all current configurations with the ones in the configuration file.

## 9.4. Ping

This menu allows user to perform PING tests using WEB GUI interface. Both IPv4 and IPv6 can be supported.

**Ping Test**

**Ping Test**

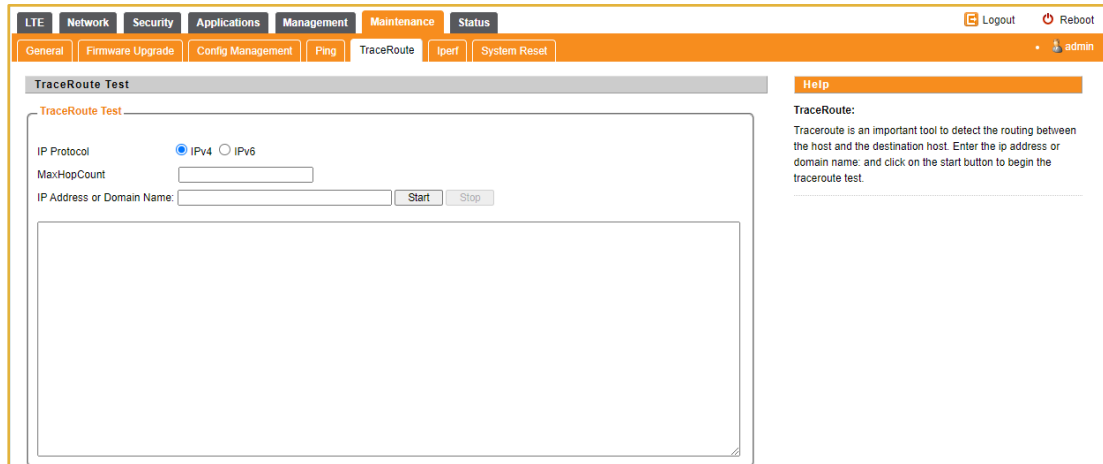

Ping

**Help**

**Ping Test:**  
The Ping test tool is used to check the network connectivity and latency. Enter the destination address and click on the start button to begin the Ping test.

## 9.5. TraceRoute

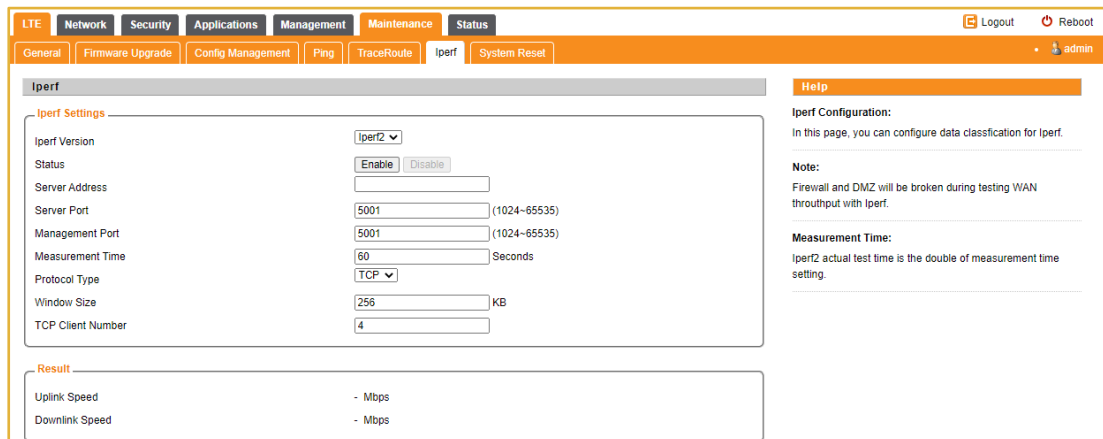

This menu allows user to configure traceroute testing

The screenshot shows the 'TraceRoute Test' configuration page. The top navigation bar includes tabs for LTE, Network, Security, Applications, Management, Maintenance, and Status. The 'Maintenance' tab is active, and the 'TraceRoute' sub-tab is selected. The page contains a 'TraceRoute Test' section with fields for 'IP Protocol' (IPv4 selected), 'MaxHopCount', and 'IP Address or Domain Name'. There are 'Start' and 'Stop' buttons. A 'Help' section on the right explains that Traceroute is used to detect routing between a host and a destination host.

## 9.6. Iperf

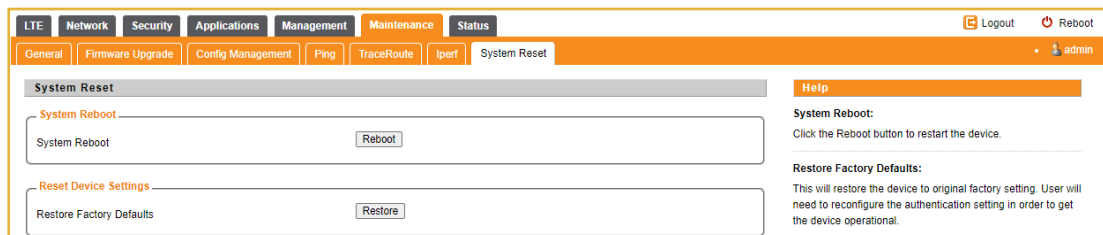

This menu allows user to configure iPerf testing using WEB GUI interface. Both TCP and UDP tests can be supported. Remote iPerf server is required to conduct the tests.

The screenshot shows the 'Iperf' configuration page. The top navigation bar is the same as in the previous screenshot. The 'Iperf' sub-tab is selected. The page contains an 'Iperf Settings' section with fields for 'Iperf Version', 'Status' (Enable/Disable), 'Server Address', 'Server Port', 'Management Port', 'Measurement Time', 'Protocol Type' (TCP selected), 'Window Size', and 'TCP Client Number'. There is a 'Result' section showing 'Uplink Speed' and 'Downlink Speed' in Mbps. A 'Help' section on the right provides information about Iperf configuration, including a note about firewall and DMZ settings and a measurement time note.

## 9.7. System Reset

This menu allows user to reboot the device or restore the device to factory defaults. Special care needs to be taken when restoring factory defaults.

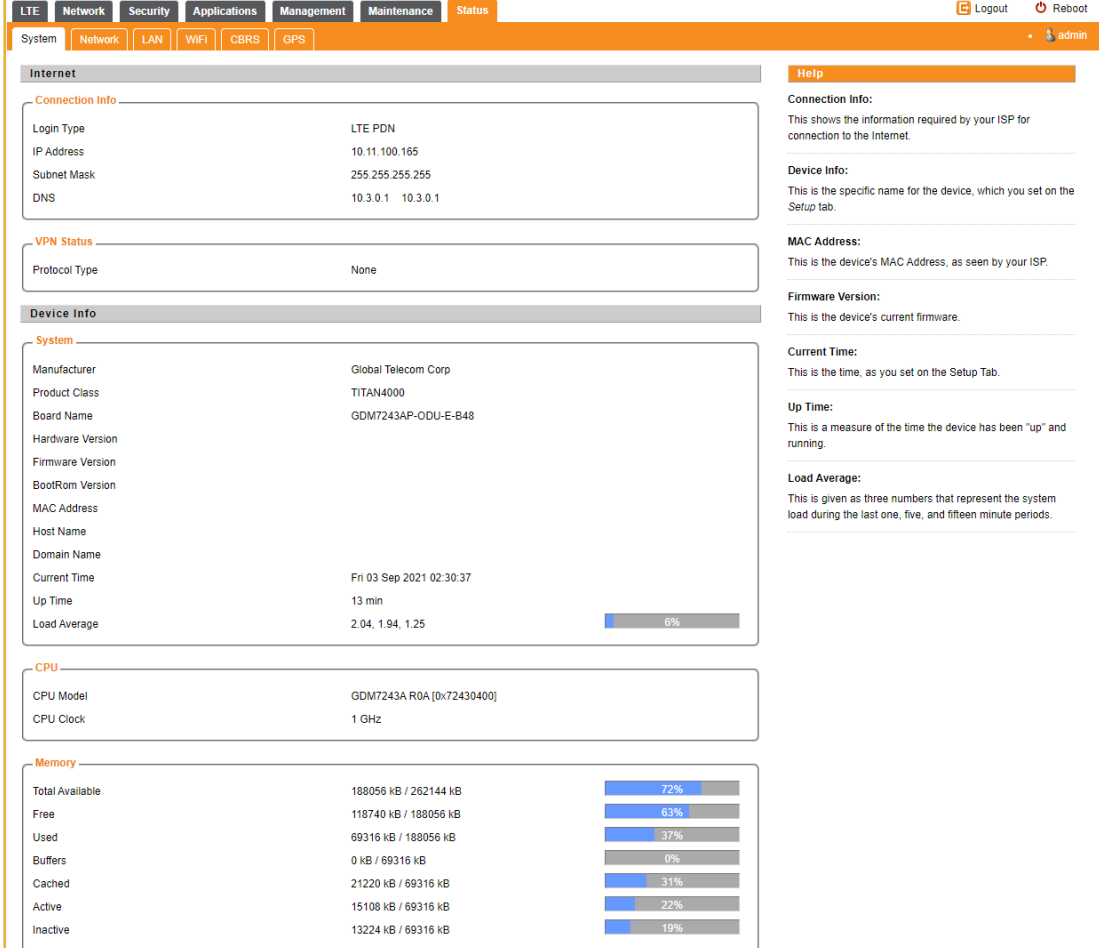

The screenshot shows the 'System Reset' configuration page. The top navigation bar is the same as in the previous screenshots. The 'System Reset' sub-tab is selected. The page contains two sections: 'System Reboot' with a 'Reboot' button, and 'Reset Device Settings' with a 'Restore' button. A 'Help' section on the right provides instructions for both actions.

## 10.Status

### 10.1. System

The menu shows the general system info of the CPE device. It includes connection, system, CPE and memory usage information.

The screenshot displays the 'Status' page of a Global Telecom CPE device. The page is organized into several sections:

- Internet:**
  - Connection Info:**

Login Type	LTE PDN
IP Address	10.11.100.165
Subnet Mask	255.255.255.255
DNS	10.3.0.1 10.3.0.1
  - VPN Status:**

## 11.Troubleshooting

---

### **Q1: My PC cannot connect to the CPE.**

- Check the PoE adapter LED is on and the CPE & PC ETH cables are securely connected. The CPE LED should work as described.
- Check the PC NIC driver is properly installed and configured.

### **Q2: My CPE networking is not working properly.**

- Check and make sure you are within the LTE coverage area and the unit is attached to the network.
- Please also check the SIM card validity.

### **Q3: Unable to connect internet while the device is already connected to LTE.**

- Check and verify your computer has proper NIC interface configured (DHCP or static IP). Unplug the PC ETH cable and reconnect again if required.
- If necessary, you may reboot the CPE by power off/on the CPE unit.
